

MCP 0.66/1.14kV Coal Mining Machine Shielded Rubber Flexible Cable

CABLE STRUCTURE:

Conductor:

Class 5 tinned copper

Insulation:

Power core: Polytetrafluoroethylene rubber (XJ-30)

Insulation shielding: Semiconductive tape

Ground core: Semiconductive rubber

(if used as a wrap, it is a semiconductive tape)

Control core: Polytetrafluoroethylene rubber (XJ-30)

Filling (optional):

Edge sealing rubber strips or glass fiber ropes

Sheath:

Chlorinated polyethylene or a mixture of other comparable materials (XH-03)

SPECIFICATION RANGE:

3 Core Power Main Core:

25 - 150 mm²

1 Core Ground Wire Core:

Refer to the structural parameter table

Control Core:

Minimum 2.5 mm² and not less than 3 cores

STANDARD:

MT 818.2-2009

APPLICATION:

Suitable for power connections of coal mining machines and similar equipment with a rated voltage not exceeding 0.66/1.14 kV.

TECHNICAL DATA:

Rated voltage: (U₀/U)

0.66/1.14 kV

The maximum system voltage : (U_m)

1.1 times U

Temperature classification:

Maximum operating temperature of the conductor:

+75°C

Operating environment temperature:

-20°C to +45°C

Cable laying temperature: Not lower than 0°C

(When the ambient temperature is below 0°C, the cable should be preheated.)

Min.Bending Radius:

6 × cable O.D

Finished product voltage test:

Power wire core: 3.7 kV / 5 minutes

Control wire core: 1.5 kV / 5 minutes

Installation method:

The laying of underground cables in coal mines is divided into methods such as in level tunnels or those below 45 °C, in chambers, and in vertical shafts or in tunnels above 45 °C or in boreholes.

CERTIFICATES:

Our series of mining products have undergone strict review by the National Coal Mine Safety Supervision Bureau and have obtained the Coal Mine Safety Mark Certification (MA Certification), providing a reliable guarantee for coal mine safety production.
